This supplement is dedicated to the memory of Professor Bryan P. Beirne
MRIA, FRES, FLS, FZS, FESC (1918-1998).

Introduction

In 1984, *A Bibliography of Irish Entomology* was published by Flyleaf Press, Dublin, in an edition of five hundred numbered copies. It was compiled by James G. Ryan, James P. O'Connor and Bryan P. Beirne. In 1998, Bryan Beirne died and in recognition of his contribution to Irish Entomology, this volume is dedicated to his memory. An obituary, written by J. P. O'Connor, was published in *The Irish Naturalists' Journal* and is reproduced as Appendix 1.

This *Supplement* covers the years 1981-2000 for journals already abstracted in the previous volume. However, the opportunity has been taken to include some new journals, reprints sent by authors, corrections and omissions. In addition, a selection of books have been added. The latter category is not comprehensive but may be of assistance to students and others commencing study of a particular group. A list of the abstracted journals and their abbreviations are given in Appendix 2. While the titles of cited journals are now frequently given in full in articles, it was not feasible to conform fully with this new convention in the *Supplement*. Its compilation was commenced over ten years ago and for most journals, it has proved too labour intensive to change the abbreviations into full titles.

The author citations of articles reporting specimens shown at the Annual Exhibition of the British Entomological and Natural History Society posed a problem. This difficulty was solved by giving them under the name of the person who compiled the report on the relevant section.

Unlike the previous volume, works with two or more orders cited in the text are now included in the General Papers section and also under the relevant Order sections if the contents are of significance. However, this has not been always possible as some cited articles were unavailable for abstraction. The *Supplement* was compiled by a page-by-page search of available volumes of the listed periodicals. When this was completed, a postal survey of most living authors was conducted in which they were asked to check the list of references under their authorship which had been found through the search and to inform us of additional references. This procedure confirmed the thoroughness of the journal search and also provided references from additional ones. These extra references have been incorporated into the *Supplement*.

Within each order, the items are listed under the author's name and under each author, they are listed in order of date of publication. Details of errors or omissions would be gratefully received by J. P. O'Connor so that they can be included in a planned second supplement. They should be sent to him at the National Museum of Ireland, Kildare Street, Dublin 2, Ireland.

Acknowledgements

The authors are very grateful to Dr Pat Wallace, Director of the National Museum of Ireland, for his encouragement and for writing the Preface, Mr Ragnall Ó Floinn, Head of Collections of the National Museum for his invaluable assistance, Dr Robin Govier, Editor of *The Irish Naturalists' Journal* for permission to reproduce Bryan Beirne's obituary, Ms Berit Pedersen, Librarian, of the Royal Entomological Society of London for supplying references and the staff of the Library of University College Dublin for facilitating research by the authors. We also wish to thank everyone who responded with such enthusiasm and kindness to the postal survey. The Irish Biogeographical Society is indebted to the National Museum of Ireland and the National Parks and Wildlife Services of the Department of the Environment for providing sponsorship towards the cost of publication.

Section 1. General Papers

- Anon. (1837) Notes of an Irish insect-hunter. *Entomological Magazine* **5**: 140-168.
- Anon. (1857) Obituary notice - Dr Robert Ball. *Ann. Mag. nat. Hist.* Series 2. **19**: 432.
- Anon. (1895) Dublin Naturalists' Field Club. *Ir. Nat.* **4**: 221-222 (Coleoptera, Diptera, Hemiptera).
- Anon. (1897) (Excursion to Ferns). *Ir. Nat.* **6**: 279 (Coleoptera, Hemiptera).
- Anon. (1909) (Excursion to Brittas Bay). *Ir. Nat.* **18**: 228 (Lepidoptera, Coleoptera).
- Anon. (1974) A check list of the Irish cave fauna. Troglaxene, troglophile and troglobite. *Trans. Cave Research Group of Great Britain* **15**: 221-222 (Coleoptera, Collembola, Diptera, Ephemeroptera, Hemiptera, Plecoptera, Trichoptera).

Appendix 1

Obituary of Bryan P. Beirne MRJA, FRES, FLS, FZS, FESC (1918-1998)

by J. P. O'Connor

(Reproduced from the *Irish Naturalists' Journal* 26: 4-7 (1998))

Bryan P. Beirne was born at Rosslare, Co Wexford, and later he came to live in Seapoint, Co Dublin. He was interested in Entomology from an early age. This interest became a passion when at 13 years of age, he collected a large thorn moth *Ennomos autumnaria* Wernberg. The species was new to Ireland and he published a note on his discovery in *The Irish Naturalists' Journal* (Beirne 1933), earning him the congratulations of both the editor and his mentor, J. N. Halbert. Subsequently, Bryan was to become a Sectional Editor of the *Journal*. He joined the Dublin Naturalists' Field Club in 1934 and was an active member for many years.

At the remarkable age of 16, he entered Trinity College, Dublin, and subsequently graduated with a PhD in Entomology. He was appointed to lecture in Entomology in the College's Department of Zoology. As one of the two-man fulltime teaching staff in that Department during and following the Second World War, his teaching load was heavy and broad. He also had curatorial duties for what was then the University Museum of Zoology and Comparative Anatomy. To supplement his university salary, which was for the first few years only £150 per annum, he established and operated a commercial pest control business. In the later 1940s, he initiated action which resulted in American funding to establish the research institution which ultimately became An Foras Taluntais. During this period, he published many innovative papers on a diverse range of Irish insect groups and other topics. These included the definitive list of Irish Microlepidoptera. He also wrote books on *British pyralid and plume moths*, *The origin and history of the British fauna* and *The genitalia of the British Rhopalocera and the larger moths* (with Pierce, F. N.).

Sadly he decided to leave Ireland, emigrating in 1948 to Canada where he was appointed to the Department of Agriculture in Ottawa. There, he worked on the systematics of leafhoppers, plantbugs and their relatives, describing more than 30 species new to science. While in the Department, he became regarded, validly, as an iconoclastic commentator on bureaucratic irrationalities. In 1955, he was promoted to Director of what was to become the Research Institute for Biological Control, Belleville, Ontario. At that time the institute was in disarray and Bryan reorganized its research and quadrupled productivity. Believing that pest problems should be dealt with by integrating different control methods in ways designed to avoid harm to useful organisms (including people), he proposed that the Institute should be moved to a university campus to allow such pest management to be implemented. Alas, this proposal was turned down.

In a typical action, he persuaded seven colleagues to resign with him and all joined the faculty of the newly-established Simon Fraser University in British Columbia. They organized the first structured professional programme leading to the then novel degree of Master in Pest Management. At the University, Bryan's research publications were primarily on the bionomics of individual pest species, principles and practices of biological control and on pest management. He became Professor of Pest Management, Dean of Graduate Studies and Emeritus Professor, retiring in 1983.

While in Canada, Bryan never lost his love of Ireland and her insects. During his retirement, he had the pleasure of seeing the publication of two major works *viz.* *A bibliography of Irish entomology* (with Ryan and O'Connor) and *Entomology: the first hundred years*. He was the prime instigator of the first work and had compiled much of it prior to leaving Ireland. Characteristically, he refused senior authorship, arguing that the priority of the other names would help the authors' careers. The second work, funded by himself, is a fascinating account of the early years of Irish Entomology and is full of marvellous anecdotes. Bryan brought back to life past Irish entomologists, their achievements and failures, personalities and foibles, inter-relationships and struggles. With characteristic courage, he did not ignore the controversial events.

During his career, he served on a great number of government, academic, editorial, national and international committees. Enjoying a long life, he published 15 books or monographs, more than 120 research papers and numerous smaller publications and reports. A selected bibliography mainly of his publications on the faunas of Ireland and Britain is given at the end of this appreciation. His Irish entomological papers are listed in Ryan *et al.* (1984) while a more comprehensive account of his works is given in his *Curriculum Vitae* deposited in the Natural History Museum, Dublin, along with his entomological collection and associated papers. Honours included Member of the Royal Irish Academy, Gold Medalist and Fellow of the Entomological Society of Canada, and a Career Achievement Award of the Science Council of British Columbia. The insect genus *Beirneola*, a number of insect species, a species of fungus and a section of a university library (at Ataturk, Turkey) are named after him.

The author had the great pleasure of meeting Bryan during his later visits to Ireland and of becoming a friend. A large man, he was warm-hearted and genial with a great sense of humour. In addition, he was a marvellous storyteller. He had a deep and lasting interest in Irish Entomology and was full of new ideas for research on the Irish insect fauna. His many letters demonstrated these facets of his character. For example, he wrote on 10 October 1994 "I am now out of the software business and into aiding in developing for production an organic plant fungicide and various insect traps, continuing investigations

First Supplement to A Bibliography of Irish Entomology

into the O'Beirne Family and analyzing effects on human behaviour of pesticide use in 1970-1985"; "Any special news about yourself, your work, or Irish entomology? A relative tells me that a book on Irish butterflies mis-spells my name throughout. Ah well.". His last communication was a note with a complimentary copy of his book *The Family O'Beirne*. It enquired "Any news about Irish entomology?". Sadly before the author could reply, Bryan died peacefully and unexpectedly in his sleep in Vancouver on 28 March 1998. A scientist of international standing, he will be remembered as one of Ireland's most talented entomologists. He will be greatly missed.
