Preface

In 2005, The Irish Biogeographical Society launched a third series of publications on Irish biodiversity. Known as the *Macro Series*, these volumes will be produced in A4 format in limited editions. Printed in 13 or 14 point and stitch-bound, the new series is perfect for checklists and bibliographies because of its large format, legibility, durability and ease of notation. The series is complimentary to the *Occasional Publications* and the *Bulletin* which are in A5 format.

The new series was initiated with *First Supplement to A Bibliography of Irish Entomology*. It was published by the Society in association with The National Museum of Ireland. I am delighted therefore that the present volume is another example of this close co-operation. On behalf of The Irish Biogeographical Society, I wish to thank Dr Pat Wallace (Director), Mr Raghnall Ó Floinn (Head of Collections) and Mr Nigel Monaghan (Keeper of Natural History) for their interest in and encouragement of this work. The Society is indebted to the National Museum of Ireland and the National Parks and Wildlife Services of the Department for the Environment for providing sponsorship towards the cost of publication.

INTRODUCTION

This is the second in a series of checklists of the Irish insect fauna, a project inspired by the manuscript list of Alexander Henry Haliday (1806-1870). The first checklist catalogued the beetles (Coleoptera) (Anderson, Nash and O'Connor, 1997). The present volume deals with the moths and butterflies (Lepidoptera). Its format differs in that popular names are included and footnotes are incorporated within the text. Of all the omissions in the Irish entomological literature, the absence of a formal list of all the Irish Lepidoptera is perhaps the most surprising. Lepidopterists have always outnumbered other entomologists on the island. Despite this advantage, most have published little if at all on their discoveries. As a result, little is known about their captures which are often housed in inaccessible private collections. In addition, there has been a tendency for Irish workers to pass their information on to British colleagues who were compiling lists or illustrated works. Some species new to Ireland have therefore been reported with little or no data and in journals easily overlooked by Irish entomologists. It is hoped that the appearance of this Checklist will encourage lepidopterists with unpublished information to make it available for other workers.

The systematic order and nomenclature of the present checklist mainly follows Bradley (2000). The latter incorporates changes in Continental European nomenclature introduced by Huemer and Tarmann (1993), Leraut (1997), Karsholt and Razowski (1996) and Prins (1998). Remarks have been made elsewhere regarding the taxonomic instability in the entomological literature (Nash and O'Connor, 2000). These changes have been especially common at generic level in the Palaearctic Macrolepidoptera, resulting in a major obstacle to researchers primarily concerned with faunistics and conservation. For this reason, common names (both in English and Irish) are given where possible. Some of the English ones depart from the usage in Bradley (2000) by retaining "THE" as employed by Baynes (1964). In addition, synonymies are included from Donovan (1936), Beirne (1941, 1942) and Baynes (1964) and from some other works when considered useful. In this context, many are partial synonymies which merely repeat the names and authorities used by those authors. It is planned to make available a more detailed list of synonymies on CD. Much of the Microlepidoptera section is based on Bond (1995).

The valid species names are given in bold and indented. Those species not included in Beirne (1941) and Baynes (1964) are indicated in the checklist by a + sign in the left-hand margin. The checklist covers species known to have been native or naturalised in Ireland and therefore includes several now thought to be extinct. Migrant species are also noted. Subspecies are given when known. These taxa have a greater importance in the Lepidoptera than in other orders. Most are based on colour and pattern differences which may have evolutionary significance. These can result in differential predation rates. The insects themselves also often react to these stimuli. However, there are strong indications that sometimes the

colour differences used in differentiating Irish subspecies are actually related to climate, especially humidity and the relatively mild frost-free conditions on the island, or to high levels of food-plant flavotoxins. The status of many subspecies is unknown in Ireland. In addition, due to the present lack of knowledge, it is impossible to ascertain whether some subspecies described/recorded from one part of the island might occur in other areas or whether the known populations uniquely represent the species here. Establishing the status of the various Irish subspecies will be a productive field for future research.

The checklist contains information on 1412 species. The layout specifies Suborder, Superfamily, Family, Subfamily, Genus, Species. A glossary of the technical terms used in the text is given on page 3.

Terms

Adventive - accidental introduction, often by commerce (see intercept).

Auctorum.; auctt.; sensu auctorum - in the sense of previous authors e.g. misidentification.

Breeding migrant - a migrant which reproduces a generation of offspring after arrival.

Colonist - an invasive alien species.

Endemic - occurring only in Britain or Ireland or both.

Form - a neutral term for a single individual, phenon (morph) or taxon (i.e. a group of variants or morphs conceptually associated by the variation alone and not forming a population); forms may prove to be ecotypes, foodplant forms, semispecies or climatic variants.

Holarctic – zoogeographic region comprising the Palaearctic region, North America and Greenland.

Intercept - intercepted e.g. by quarantine inspection.

Migrant - an individual or species on migration, i.e. on periodic or seasonal movement over relatively long distance and in Britain and Ireland from overseas.

Nearctic - zoogeographic region comprising North America and Greenland (and now North Mexico).

Nomen dubium - a name of unknown or doubtful application.

Nominate - ssp. nominotypical or nominate subspecies containing the type of the species and having the same name.

Non-British [Isles] - not occurring in Britain or Ireland.

Palaearctic - zoogeographic region comprising Europe, North Africa, Siberia, North China and Japan.

Protected species - protected by law from collecting and sale: separate legislation applies in Northern Ireland and the Irish Republic.

Sp.; spp.; species (singular); species (plural) - groups of actually (or potentially) interbreeding natural populations which are reproductively isolated from other such groups (amongst other definitions).

Ssp.; sub-species - a geographically defined aggregate of local populations which differs taxonomically from other such aggregates (sub-division of the species).

Synanthropic - living in association with man; frequently pests, feeding on or spoiling food products, woollen clothing or textiles.

Transitory resident - species which establishes as a resident, apparently dies out and then restablishes; such species possibly expanding range (due to global warming for instance) will eventually become residents.

Vagrant - stray or wandering individual, casual migrant.

+ *sangii* (Wood, 1891)

Footnote: Bond (1984b).

+ *semipurpurella* (Stephens, 1835)

Footnote: Bond (1984b). Beirne (1941) quotes records of *E.*

ERIOCRANIOIDEA

2. ERIOCRANIIDAE

SPARKLING ARCHAIC SUN MOTHS

***ERIOCRANIA* ZELLER, 1851**

+ *subpurpurella* (Haworth, 1828)

Synonymy: in *Dysericrania* Spuler, 1910 in Bond (1995).

Synonymy: in *Mnemonica* in Beirne (1941).

+ *chrysolepidella* Zeller, 1851

Synonymy: *Heringocrania* Kuznetsov, 1941.

Footnote: Mere and Pelham-Clinton (1966).

+ *unimaculella* (Zetterstedt, 1839)

semipurpurella by Birchall (1866-67),
but adds “confirmation is desirable”.

HEPIALOIDEA

3. HEPIALIDAE

GHOST MOTHS

HEPIALUS FABRICIUS, 1775

humuli humuli (Linnaeus, 1758)

GHOST MOTH

Synonymy: *humuli* L. in Baynes (1964).
Footnote: *humuli* is the subspecies found
throughout all of the British Isles except
Shetland (sub-species *thulensis* Newman,
1865).

hecta (Linnaeus, 1758)

GOLD SWIFT

Synonymy: *Phymatopus* Wallengren,
1869.

lupulinus (Linnaeus, 1758)

COMMON SWIFT

Synonymy: *Korscheltellus* Börner, 1920.

fusconebulosa (DeGeer, 1778)

MAP-WINGED SWIFT

Synonymy: *Pharmacis* Hübner, 1820.

Synonymy: *Korscheltellus* Börner, 1920.

NEPTICULOIDEA

4. NEPTICULIDAE

PIGMY MOTHS

**BOHEMANNIA STANTON,
1859**

quadrimaculella (Bohemian,
1851)

Synonymy: in *Scoliaula* in Beirne
(1941).

+ *pulverosella* (Stanton, 1849)

Footnote: Emmet (1971); also
recorded by Bradley: mines on
Malus, Ballynalackan Castle
garden, Co. Clare, June 1970
(Bond, 1995).

Footnote: Bond (1996).

+ *arcuatella* (Herrich-Schäffer,
1855)

Footnote: Heal (1985).

+ *rubivora* (Wocke, 1860)

Footnote: Mere and Pelham-Clinton (1966); Bradley and Pelham-Clinton (1967).

***occultella* (Linnaeus, 1767)**

Synonymy: *Nepticula argentipedella* Zeller *in* Beirne (1941).

+ *minimella* (Zetterstedt, 1839)

Synonymy: *woolhopiella* (Stainton, 1887).

Synonymy: *mediofasciella* sensu auctorum.

Footnote: Emmet (1973).

+ *albifasciella* (Heinemann, 1871)

Footnote: Emmet (1981).

+ *subbimaculella* (Haworth, 1828)

Footnote: Shackleton (1977) (det. Emmet). This species was recorded as Irish by Beirne (1941), but in view of uncertainties about earlier determinations, Shackleton's record should be treated as the first confirmed Irish record (Bond, 1995).

***septembrella* (Stainton, 1849)**

Synonymy: *Fomoria* Beirne, 1845 (Sub-genus).

Footnote: Beirne (1945b).

***TRIFURCULA* ZELLER, 1848**

+ *subnitidella* (Duponchel, 1843)

Synonymy: *griseella* Wolff, 1957.

Synonymy: *Trifurcula* Zeller (Sub-genus).

Footnote: Mere *et al.* (1962).

***immundella* (Zeller, 1839)**

+ *cryptella* (Stainton, 1856)

Synonymy: *Levarchama* Beirne, 1945 (Sub-genus).

Footnote: Emmet (1975a).

Footnote: Beirne (1945b).

+ *eurema* (Tutt, 1899)

Synonymy: *Levarchama* Beirne, 1945 (Sub-genus).

Synonymy: *laichartingella* (Goeze, 1783) *in Bond (1995)*.

Footnote: the name *herminata* (Geoffroy, 1785) is used in Hättenschwiler (1985) and Emmet (1991a); *laichartingella* is a *nomen dubium* *vide* Hättenschwiler (1985).

PSYCHINAE

***LUFFIA* TUTT, 1899**

***ferchaultella* (Stephens, 1850)**

Synonymy: *lapidella* sensu Beirne (1941).

Footnote: the status of this parthenogenetic species is uncertain (Emmet, 1991a) and it is possible that it is a form of the bisexual species *L. lapidella* (Goeze, 1783), under which name Beirne (1941) recorded it.

***PSYCHE* SCHRANK, 1801**

***casta* (Pallas, 1767)**

Synonymy: *in Fumea* *in Beirne (1941)*.

+ *crassiorella* Braund, 1850

Synonymy: *in Fumea* *in Beirne (1941)*.

Footnote: Beirne (1941) considered the Tyrone record to be doubtful but later confirmed it (Beirne, 1942). Bradley (2000) also gives Tyrone.

EPICHNOPTERIGINAE

EPICHNOPTERIX HÜBNER, 1825

plumella (Denis and Schiffermüller, 1775)

Synonymy: *pulla* Esp. in Beirne (1941).

Footnote: Emmet *et al.* (1985) state that *C. elongella* occurs wherever its foodplant (*Alnus glutinosa* (L.) Gaertn.) is found throughout the British Isles and their accompanying map indicates records from twelve Irish vice-counties. Beirne (1941) stated that this species was widely distributed in Ireland. However, when Beirne wrote, *C. elongella* and *C. betulicola* were not recognised as separate species. Published records include Mere and Pelham-Clinton (1966), Ellerton (1967) and Emmet (1968).

+ *betulicola* (M. Hering, 1927)

Footnote: the only published record appears to be that of Langmaid (1989) from West Mayo. In addition, the distribution map in Emmet *et al.* (1985) indicates records from North Kerry, Offaly, Wicklow and Armagh. Records in Beirne (1941) of *C. elongella*, *q. v.* could refer to either that species or *C. betulicola*.

Synonymy: *birdella* Curtis in Beirne (1941).

+ *urella* Fischer von Röslerstamm, 1842

Synonymy: *bisontella* (Lienig and Zeller, 1846).

Footnote: Beirne (1941) considered the Irish status to be doubtful pending confirmation, due to uncertainties about the identification. Beirne (1945a) reported *Ochsenheimeria birdella* (synonym *bisontella* (Lienig and Zeller, 1846)). According to Emmet (1985a), Beirne's records are now accepted "since its presence there has now been confirmed". The only published record is Bond (1989).

+ *lutipennella* (Zeller, 1838)

Footnote: Bond (1996). All of
Beirne's (1941 - in *Eupista*) records
of this species, so far checked, refer
to *C. flavigennella*.

gryphipennella (Hübner, 1796)

Synonymy: in *Eupista* in Beirne

Synonymy: *nigricella* sensu auctorum.

Footnote: Bond (1996). The records of *Eupista nigricella* Stephens in Beirne (1941) probably refer to this species, and the same applies to Barrett's (1885) record of *C. nigricella* "along hawthorn hedges".

Footnote: Mere *et al.* (1964); Emmet (1971).

+ *trifolii* (Curtis, 1832)

Synonymy: *frischella* sensu auctorum.

Footnote: recorded by Bradley and Pelham-Clinton (1967). There is also one Beirne female genitalia slide of this species in NMI (checked KGMB) but as the specimens are missing, it is not known to which record the slide refers. This and the closely related species (*C. frischella* and *C. deauratella*) have been much confused in the past, and the partial absence of both the specimens and the genitalia slides has meant that most of the older records cannot be checked (Bond, 1995).

+ *frischella* (Linnaeus, 1758)

Synonymy: in *Eupista* in Beirne (1941).

Synonymy: *Eupista alcyonipenella* Koll. in Beirne (1941).

Footnote: recorded by Beirne (1941) but only one of his two remaining genitalia slides of this species is correctly labelled - the other being *C. trifolii* (*q. v.*). Also recorded by Bradley and Pelham-

Clinton (1967), but dissections of some of their specimens show them to be *C. deauratella*; while their record of larval cases on *Centaurea nigra* L. appears to refer to *C. paripennella* Zeller. The species was also recorded by Emmet (1971), but his record of *C. nigra* as the foodplant also indicates that *C. paripennella* is intended (Bond, 1995).

***mayrella* (Hübner, 1813)**

Synonymy: *Eupista spissicornis* Haw. in Beirne (1941).

***deauratella* Lienig and Zeller, 1846**

Synonymy: in *Eupista* in Beirne (1941).

+ *lithargyrinella* Zeller, 1849

Synonymy: *olivaceella* Stainton, 1854. Footnote: confirmatory records in Bond (1996). Beirne (1941) had considered that Barrett's (1861b) record of this species (as *olivacella* missp.), also from the cliffs at Howth, Co. Dublin, to be doubtful pending confirmation. "The 'I' in the distribution column in Emmet (1991a) is a misprint for 'H'" (Bond, 1995).

***laricella* (Hübner, 1817)**

LARCH CASE-BEARER

Synonymy: in *Eupista* in Beirne (1941).

+ *lixella* Zeller, 1849

Footnote: Bradley and Pelham-Clinton (1967); considered doubtfully Irish by Beirne (1941).

+ *albidella* (Denis and Schiffermüller, 1775)

Footnote: there are two larval cases in NMI labelled "Newcastle marshes [Wicklow]", about which Beirne (1941 in *Eupista*) had written "confirmation is desirable". The species is also recorded by Emmet (1968), and by Bradley from Boulevan, Co. Clare, ♂, 18 June 1970 (Bond, 1995).

Synonymy: *troglodytella* (Duponchel).

Footnote: Bradley (1952, 1960).

+ *trochilella* (Duponchel, 1843)

Footnote: Agassiz (1982).

Bradley's (1952, 1960) record as *C. troglodytella* (Duponchel) refers to *C. follicularis* (Vallot).

+ *ramosella* Zeller, 1849

Footnote: Bradley (1960).

+ *peribenanderi* Toll, 1943

Footnote: Bradley (1960). Beirne (1945a) refers to a specimen taken which was "probably" *therinella*, but this specimen has not been traced, and the species was confused with *C. peribenanderi* at the time.

+ *paripennella* Zeller, 1839

+ *therinella* Tengström, 1848

Synonymy: *Aphelosetia* Stephens, 1834 (Sub-genus).

Footnote: recorded from the Burren, Co. Clare, by Mere and Pelham-Clinton (1966) and by Bradley and Pelham-Clinton (1967). Birchall (1866-67) recorded *Elachista pollinariella* from Howth, while Hodgkinson (1868) recorded *E. collitella* from the same locality. British records of *E. pollinariella* are now considered to refer to *E. subocellea* (Stephens), while *E. collitella* (Duponchel) is considered to be a junior synonym of the same species. Beirne (1941), treating *E. pollinariella* and *E. colitella* as distinct species,

considered that the Irish records of both were doubtful. *E. subocellea* has however been recorded recently from Howth by Bond (1995).

+ *cahorsensis* Traugott-Olsen, 1992

Synonymy: *dispunctella* (Duponchel) sensu auctorum.
Synonymy: *Aphelosetia* Stephens, 1834 (Sub-genus).

Footnote: Bond (1996). Hogan (1854) recorded *Elachista triseriatella* from Howth, Co. Dublin, and Beirne (1941) treated this record as referring to the very similar *Elachista dispunctella* (Duponchel) with which it had been confused, but also considered the record doubtful. According to Bland (Emmet, *in litt.*), the other Irish records of *E. dispunctella* (Bradley, 1952; Bradley and Pelham-Clinton, 1967; Heckford and Langmaid, 1991) also refer to *E. cahorsensis* (Bond, 1995).

Müller and Kautz (1939) reapplied the name to the subspecies occurring in Ireland (Kudrna, O. 1983)) The nominate is not found in the British Isles (only Continental Europe). Higgins (1975) does this but then recognises three sub-species *viz.* *tullia* Müller (Central Europe), *demophile* Freyer (Fennoscandia and Scotland) and *rhodopensis* Elwes (Central Italy and the Balkans). This limits the options for Ireland to two i.e. the unsubspected clinal forms and *demophile* Freyer. Baynes (1964) states "The Irish insects appear to be more closely allied to the Scottish sub-species *scotica* Staudinger, rather than to the sub-species *philoxenus* Esper, found in the north of England". Abstract

Additions, deletions and corrections are made to the Irish checklist of butterflies and moths (Lepidoptera). *Elachista biatomella* (Stainton, 1848) is added to the Irish list. The total number of confirmed Irish species of Lepidoptera now stands at 1480.

Key words: Lepidoptera, additions, deletions, corrections, Irish list, *Elachista biatomella*

Introduction

Bond, Nash and O'Connor (2006) provided a checklist of the Irish Lepidoptera. Since its publication, many new discoveries have been made and are reported here. In addition, several deletions have been made. A concise and updated checklist is provided. The following abbreviations are used in the text: BM(NH) – The Natural History Museum, London; NMINH – National Museum of Ireland, Natural History, Dublin. The total number of confirmed Irish species now stands at 1480, an addition of 68 since Bond *et al.* (2006).

Taxonomic arrangement

As a result of recent systematic research, it has been necessary to replace the arrangement familiar to British and Irish Lepidopterists by the Fauna Europaea [FE] system used by Karsholt

and Razowski, which is widely used in continental Europe. While the FE species numbering system is also adopted in this checklist, in order to assist those familiar with the Bradley and Fletcher numbering system, the FE species numbers are followed, in square brackets, by the Bradley and Fletcher numbers. The FE sequence is strictly followed throughout, except in a few cases where newer generic combinations would have meant splitting families or genera, e.g. in the families Oecophoridae and Elachistidae. The former families Lymantridae and Arctiidae have been combined into the Erebidae, which follows the Noctuidae and the Nolidae respectively, the latter of these including some species previously placed in the Noctuidae.

Species added to the Irish Lepidoptera list since Bond *et al.* (2006)

293 [39]. *Ectoedemia heringi* (Toll, 1934)

Ectoedemia heringi was recorded from St John's Wood, Co. Roscommon, by the senior author on 12 October 2010, and reported as new to Ireland in Langmaid and Young (2011). There is, however, an earlier overlooked record: Heal (unpublished) in his "Miscellaneous notes and observations on the Microlepidoptera of Ireland", writes on p. 81 of finding mines, some tenanted, of this species (as *E. quercifoliae* (Toll, 1943) and *E. subbimaculella* (Haworth, 1828)) at Dixon Park, near Dunmurry, Co. Antrim, in November 1979, and provides a distinguishing feature (larval head colour) for the two species.

1111 [285]. *Caloptilia azaleella* (Brants, 1913)

The Azalea Leaf Miner *Caloptilia azaleella* was recorded in south Belfast, Co. Antrim, on 1 June 2002 (Higgott and Mackie, 2003; Langmaid and Young, 2003).

1129 [284]. *Caloptilia rufipennella* (Hübner, 1796)

Caloptilia rufipennella was recorded from Belfast, Co. Down, on 17 July 2003 by J. B. Higgott (Langmaid and Young, 2006). More recent records are: Gormanston, Co. Meath, 25 August 2007 and 25 July 2001 (E. O'Donnell); Tramore, Co. Waterford, 25 October 2005 (Bryant); Dublin City (National Botanic Gardens), 15 August 2009 and Cork City, 11 August 2011 (the last two by the senior author).

1403 [439]. *Swammerdamia compunctella* Herrich-Schäffer, 1855

Swammerdamia compunctella was recorded in south Belfast, Co. Antrim, on 2 June 2002, as the first Irish record (Higgott and Mackie, 2003; Langmaid and Young, 2003). Older records have, however, been found in collections: a female specimen under “*Swammerdamia caesiella*” labelled “Armagh 27/6/[18]89” was found by the senior author in the Johnson collection in NMINH, and its identity determined by dissection; a 1980 specimen from Loughgall, Co. Armagh has been found in the Faulkner collection; specimens from Brackagh and Aughinlig, both also Co. Armagh, dated 1998 and 1999 respectively, have been found in the Murphy collection (male dissected by the senior author). More recently the senior author took a specimen at Lullymore, Co. Kildare on 8 July 2006.

1442 [409a]. *Argyresthia trifasciata* Staudinger, 1871

This species was taken at Maynooth, Co. Kildare, on 1 June 2006, and has subsequently been taken there annually from mid May until the end of June (Strickland, pers. comm.). Elsewhere, it has been taken in 2010 at Finaghy, Co. Antrim (Mellon, pers. comm.); Dundalk, Co. Louth in 2010, May 2011 and in 2012 by D. Hodgers <<http://pets.groups.yahoo.com/group/MothsIreland/message/7320>>; Sallins, Co. Kildare, May 2011, G. de Jong <<http://pets.groups.yahoo.com/group/MothsIreland/message/05858>>; near Maghera, Co. Derry in late May, 2012 (C. Bertrand, pers. comm.) <<<http://pets.groups.yahoo.com/group/MothsIreland/message/8977>>, and by the senior author in Cork City on 15 May 2012.

1447a [409b]. *Argyresthia cupressella* Walsingham, 1890

Argyresthia cupressella was recorded from Belfast, Co. Antrim, by J. B. Higgott, on 16 July 2003 (Langmaid and Young, 2004; Bond, 2009). More recently it has also been recorded from Maynooth, Co. Kildare (Strickland, pers. comm.).

1572 [476]. *Acrolepia autumnitella* Curtis, 1838

Adults of *Acrolepia autumnitella* were reported from Maynooth, Co. Kildare, in May and July 2009. Subsequently blotch mines belonging to the species were found on bittersweet nightshade, *Solanum dulcamara*, in Cork City in August 2009 (Langmaid and Young, 2010;

Strickland and Bond, 2011). The species was also recorded by E. O'Donnell at Stamullen, Co. Meath on 16 April 2011.

1668 [666]. *Semioscopis avellanella* (Hübner, [1793])

Semioscopis avellanella was recorded from Cratloe Wood, Co. Clare, by K. Hannan on 18 March 2008. The identity of the specimen, a female, was confirmed by dissection by the senior author. The specimen is in the NMINH collections (Reg. No. NMINH 2008: 255). This record is shown on a map by Tyner (2011a). Kane (1901) lists a record from Wicklow by G. V. Hart, but Beirne (1941) considered this record to be unreliable, citing "the foodplant *Tilia parvifolia* is non-indigenous". *S. avellanella* is now known to feed on a variety of deciduous tree species.

1670 [667]. *Semioscopis steinkellneriana* ([Denis and Schiffermüller], 1775)

Semioscopis steinkellneriana was recorded from Ballynahone Bog and Drumlamph Wood, Co. Derry, in 2010 (Leonard, 2011; Langmaid and Young, 2011).

1874 [595]. *Elachista biatomella* (Stainton, 1848)

New to Ireland

A male specimen in the BM(NH) Collections taken by Bradley at Glengarriff, West Cork in June 1952 has recently been identified as *Elachista biatomella* following dissection by the senior author.

2048 [903]. *Chrysoclista linneella* (Clerck, 1759)

A specimen was photographed at Marina, Cork City, May 2011 by John O'Sullivan. This species was recorded from Holywood, Co. Down (Hogan, 1855), and was also listed from an unstated locality in Haliday's unpublished manuscript, but the records were considered doubtful by Beirne (1941), and the species was omitted in Bond (1995) and Bond *et al.* (2006).

2049 [902]. *Chrysoclista lathamella* T. Fletcher, 1936

Chrysoclista lathamella was recorded from Cronykeery, Co. Wicklow, by A. Tyner on 18 June 2005 (Langmaid and Young, 2006).

2883 [885]. *Mompha conturbatella* (Hübner, [1819])

A female *Mompha conturbatella* was taken at Peatlands Park, Co. Armagh, by K. Murphy on 9 July 2001, det. by the senior author (Bond, 2009). Further recent records include: two sites in Co. Louth: four specimens at Mullaghtatin, Cooley Mountains, 28 June to 6 July 2011, and

one at Stormanstown Bog, Ardee on 10 July 2012 (D. Hodgers); Girley Bog, Co. Meath on 27 June 2012 (E. O'Donnell), and Lullymore West and Maynooth, both Co. Kildare, July 2011 (P. Strickland).

2885 [887]. *Mompha lacteella* (Stephens, 1834)

A male was taken at Rathgar, Dublin City on 26 June 1971 by M. Jeffares. The specimen has recently been dissected by the senior author. A 19th century record, possibly from Belfast, referred to by Hogan (1855) was considered doubtful by Beirne (1941).

2904a [874]. *Blastobasis lacticolella* Rebel, 1940

Blastobasis lacticolella was recorded from Cronykeery, Co. Wicklow and Tyrella, Co. Down (as *Blastbasis decolorella* (Wollaston)) (Langmaid and Young, 2003). This spreading species is currently known from a number of sites in eastern Ireland, extending from Co. Antrim southwards to Co. Waterford.

3095 [908]. *Sorhagenia rhamniella* (Zeller, 1839)

Sorhagenia rhamniella was recorded from Coolorta, Co. Clare, on 5 August 2006 (Clancy, 2007a). The record is also given in Langmaid and Young (2007). Records of *Sorhagenia* were previously considered to belong to one species, *S. lophyrella* (Douglas). This species complex was later shown to consist of three species. Bradley's records as "lophyrella" are indeed of that species. In addition, a much earlier (1888) specimen of *S. lophyrella* labelled: "Athlone 28-VII-88" was recently found by the senior author in the JJFX King Collection in Glasgow. King's notes indicate that the specimen was taken at Yewpoint, Co. Roscommon, about 7km NNW of Athlone.

3327 [737]. *Monochroa palustrellus* (Douglas, 1850)

Monochroa palustrellus was recorded from Leagh South near Kinvarra, Co. Galway, on 5 August 2006 (Clancy, 2007a). The record is also given in Langmaid and Young (2007).

3400 [758]. *Recurvaria leucatella* (Clerck, 1759)

A female of this species was taken by E. O'Donnell on 23 July 2011 at Monaleen, in the Burren, Co. Clare. The specimen has been deposited in the NMINH collections (Reg. No. 2011.39.1).

3419 [774]. *Teleiodes luculella* (Hübner, [1813])

A male *Teleiodes luculella* was recorded from Cronykeery, Co. Wicklow, by A. Tyner on 10 July 2003 (Langmaid and Young, 2004). The specimen is in the NMINH collections (Reg. No. NMINH 2003: 77). Further specimens have been recorded from this site in 2007, 2010 and 2012. The species has also been recorded from Killarney National Park, North Kerry in 2009 (P. Chapman), and from Killoughrum, Co. Wexford in 2010 and 2012 (M. O'Donnell).

3648 [825]. *Phthorimaea operculella* (Zeller, 1873)

The Potato Tuber Moth, *Phthorimaea operculella*, was recorded from Tramore, Co. Waterford, at a light-trap, on 28 September 2006 (Bryant, 2009b; Langmaid and Young, 2009b). The determination of the specimen, a female, was confirmed by the senior author by dissection. The specimen is in the NMINH collections (Reg. No. NMINH 2008: 25).

3795 [850]. *Syncopacma polychromella* (Rebel, 1902)

This migrant species was recorded from Tramore, Co. Waterford, by T. Bryant on 30 May 2009 (Bryant, 2009c; Bryant and Walsh, 2010; Clancy, 2012). The specimen, a male, is in the NMINH collections (Reg. No. NMINH 2009: 54).

4380 [1059]. *Acleris abietana* (Hübner, 1822)

This species was found on 16 and 20 April 2010, and 30 April 2011 at Mountstewart, Co. Down, by David McCormick. The last of these, a female, was dissected by the senior author.

4385a [1062a]. *Acleris effractana* (Hübner, [1799])

Acleris effractana was recorded from the west of Ireland by Karsholt *et al.* (2005). Their record was based on two specimens, found by the senior author in the Sheldon Collection in BM(NH) labelled “Co. Clare Aug 1929 WGS”. Prior to Karsholt *et al.* (2009), this species had been confused with the widespread *A. emargana* (Fabricius). There is also a recent record of a male taken by the senior author at Einagh, in the west of Co. Clare, 2 August 2005. The identity of this specimen was confirmed by dissection.

4482 [1018]. *Cnephasia communana* (Herrich-Schäffer, 1851)

Cnephasia communana was recorded from Copeland Island, Co. Down, by K. Murphy on 16 June 2003 (Bond, 2009). The specimen, a female, was dissected and identified by J. Clifton.

4660 [1112a]. *Bactra venosana* (Zeller, 1847)

A male of this migrant species, which has not been recorded from Great Britain, was taken at Tramore, Co. Waterford on 22 September 2006 (dissected by the senior author) (Bryant and Bond, 2008; Langmaid and Young, 2007a; Clancy, 2008a). The specimen has been deposited in NMINH (Reg. No. 2008.21).

4669 [1101]. *Endothenia ustulana* (Haworth, 1811)

Three specimens taken at Cappoquin, Co. Waterford, were found by the senior author in the J. J. F. X. King collection, Hunterian Museum, Glasgow. They are dated July to August 1902 (Langmaid and Young, 2010).

4793 [1108]. *Lobesia abscisana* (Doubleday, 1849)

Lobesia abscisana was recorded from Stamullen, Co. Meath, by E. O'Donnell on 21 July 2009 (Langmaid and Young, 2009b). There have been several subsequent records: Dundalk, Co. Louth, 2010 and 2011 (D. Hodgers); Cronykeery, Co. Wicklow, 2010, 2011 and 2012 (A. Tyner), and Kilmichael Point, Co. Wexford, 2012 (M. O'Donnell).

4866 [1130]. *Epinotia pygmaeana* (Hübner, [1799])

A specimen of *Epinotia pygmaeana* was taken in a coniferous plantation at Ballyguyroe North in the Ballyhoura Mountains, Co. Cork, on 13 April 2009 (Bond, 2010). A further specimen was taken there by the senior author in April 2011.

4948 [1193]. *Eucosma tripoliana* (Barrett, 1880)

Eucosma tripoliana was recorded from Tramore saltmarsh, Co. Waterford, by T. Bryant on 18 August 2006 (Langmaid and Young, 2009b). A specimen was also taken by K. Murphy in 2005, probably at Mill Bay, Co. Down, but the site of capture remains uncertain. More recent records include Dundalk, Co. Louth in 2011 (D. Hodgers), and Little Island, Co. Cork, 26 July 2012 (the senior author). Specimens from all four locations have been dissected by the senior author.

5042 [1207]. *Clavigesta purdeyi* (Durrant, 1911)

The Pine Leaf-Mining Moth, *Clavigesta purdeyi*, was recorded from Tramore, Co. Waterford, on 4 August 2004 (Bryant, 2007b). A record from Barnland, Co. Wexford, by M.

O'Donnell on 5 August 2006 is given as "New to Ireland" by Langmaid and Young (2007).

5066 [1119a]. *Ancylis diminutana* (Haworth, 1811)

A female of this species, dissected by the senior author, was taken at St John's Wood, Co. Roscommon, by the senior author on 18 June 2010 (Langmaid and Young, 2011).

5154 [1262]. *Cydia amplana* (Hübner, [1800])

The first published Irish record of this species is of a specimen taken at Ashford, Co. Wicklow, by Angus Tyner on 11 August 2004 (Clancy, 2007b). Subsequently, a slightly earlier record was published by Clancy (2008a), Langmaid and Young (2009a) and Bryant (2010a). This referred to a male taken at Tramore, Co. Waterford, on 4 August 2004 by T. Bryant. This specimen was dissected by the senior author, and is in the NMINH collections (Reg. No. NMINH 2009: 55).

5181 [1227]. *Pammene giganteana* (Peyerimhoff, 1863)

A female of this gall-feeding species was taken on 7 April 2011 at Gortnamona, near Ballingeary, West Cork by J. Seawright. The specimen was dissected by the senior author.

5184 [1229]. *Pammene albuginana* (Guenée, 1845)

A male was reared "from decaying beech wood with moss" (Heal card index) on 28 May 1976 (dissected by the senior author) (Bond, 2009). This is the specimen that was referred to as possibly being *Pammene herrichiana* in Bond (1995).

5186 [1225]. *Pammene obscurana* (Stephens, 1834)

This species was recorded from Barnland, Co. Wexford on 11 June 2010 by M. O'Donnell. The identity of the specimen, a male, was determined by dissection by the senior author. A further record is: Lullymore, Co. Kildare, 7 May 2011 (P. Strickland).

5200 [1239]. *Pammene ochsenheimeriana* (Lienig and Zeller, 1846)

A male was taken at Rathescar Wood (O028869), Co. Louth, on 1 June 2011 by D. Hodgers. The identity was confirmed by the senior author following dissection; the specimen is held in NMINH (Reg. No. 2011.23.1).

5205 [1237]. *Pammene germmanna* (Hübner, [1799])

Pammene germmanna was recorded from Aughinlig, Co. Armagh, on 19 June 2009

(Langmaid and Young, 2010). A further specimen, a female dissected by the senior author, was taken by M. O'Donnell, at Killoughrim Forest, Co. Wexford on 26 June 2010; the species was again recorded there in 2011.

5302 [484]. *Epermenia aequidentellus* (E. Hofmann, 1867)

Epermenia aequidentellus was recorded from Tramore Burrow, Co. Waterford, on 16 July 2006 (Bryant, 2009a; Langmaid and Young, 2009b). The specimen, a female, is in the NMINH collections (Reg. No. 2008: 21).

5305 [481]. *Epermenia falciformis* (Haworth, 1828)

A specimen of *Epermenia falciformis* was taken at Brackagh, Co. Armagh, on 19 June 1998 by Kenny Murphy. More recently it has been taken by the same recorder at several other sites in Co. Armagh, and at Derryvore, Co. Fermanagh, 9 July 2005 (Bond, 2009). The species was also recorded at Lullymore, Co. Kildare on 7 July 2006 by M. O'Donnell.

5454 [1492]. *Crombruggia laetus* (Zeller, 1847)

Crombruggia laetus was recorded from Tramore, Co. Waterford, on 27 June 2006 (Bryant and Bond, 2010; Clancy, 2011). The record is given under *Oxyptilus laetus* by Langmaid and Young (2010). A second specimen, a female, was recorded by M. O'Donnell at Kilpatrick, Co. Wexford on 27 June 2011. Both specimens were dissected by the senior author.

5459 [1494]. *Capperia britanniodactyla* (Gregson, 1867)

A specimen was taken on 1 July 2007 at Murlough, Co. Down by K. Murphy (det. J. Clifton). Prior to this the only known Irish specimens were about a dozen labelled "Derry" in the BM(NH) (Shaffer, 1971; Hart, 2011). The species was omitted by Bond (1995) and Bond *et al.* (2006).

5652 [1413]. *Hypsopygia costalis* (Fabricius, 1775)

Two specimens of the Gold Triangle, *Hypsopygia costalis*, were record from Cronykeery, Ashford, Co. Wicklow, by A. Tyner, 25 and 28 September 2006 (Langmaid and Young, 2007; Walsh *et al.*, 2009). A further specimen was taken by E. Rolston at Murlough NNR, Co. Down on 13 July 2008.

5658 [1415]. *Hypsopygia glaucinalis* (Linnaeus, 1758)

This species was recorded from Murlough NNR, Co. Down, in August 2012 by A. Crory (per E. Rolston). There are old unconfirmed records of this species from Co. Wicklow (Birchall, 1873; Sinclair, 1879), and from Belfast (Watts, 1894).

***5751 [1441]. *Oncocera semirubella* (Scopoli, 1763)**

This species was recorded (as *Ilythyia semirubella*) from Dursey Island, West Cork by Kane (1901). The record was considered in need of confirmation by Beirne (1941) but is included in Sterling and Parsons (2012).

5848 [1465]. *Nephopterix angustella* (Hübner, 1796)

Nephopterix angustella was recorded from Tramore, Co. Waterford, by T. Bryant on 3 September 2010 (Bryant, 2010b; Langmaid and Young, 2011).

6246 [1298]. *Crambus ericella* (Hübner, [1813])

Crambus ericella was recorded from Glendasheevar (then referred to as Braade), Co. Fermanagh, by M. R. Young in the period 12-14 July 2002 (Langmaid and Young, 2003).

6314 [1316]. *Catoptria falsella* ([Denis and Schiffermüller], 1775)

A male *Catoptria falsella* was taken at Cronykeery, Co. Wicklow, by A. Tyner on 9 July 2005 (Davis, 2006). The specimen is in the NMNH collections (Reg. No. NMNH 2007: 5). Subsequently a number of further specimens have been recorded at this site, and one was recorded at Blackditch, Co. Wicklow on 22 July 2008 (A. Tyner, pers. comm.).

6367 [1324]. *Pediasia aridella* (Thunberg, 1788)

Pediasia aridella was recorded from Tramore, Co Waterford, in June and July 2007 (Bryant, 2009a; Langmaid and Young, 2010). A male taken at actinic light-trap on 8 June 2007 is in the NMNH collections (Reg. No. NMNH 2008: 21). In addition, two specimens were recorded at Kilmichael Point, Co. Wexford on 26 June 2009 by M. O'Donnell.

6499 [1357]. *Evergestis extimalis* (Scopoli, 1763)

Evergestis extimalis was recorded at Cronykeery, Co. Wicklow, by A. Tyner on 24 July 2003 (Clancy and Skinner, 2007). The specimen is in the NMNH collections (Reg. No. NMNH 2003: 78).

6521 [1360]. *Hellula undalis* (Fabricius, 1781)

The Old World Webworm, *Hellula undalis*, was recorded from Tramore, Co. Waterford, on 24 September 2006 (Bryant, 2009b; Langmaid and Young, 2009b). The specimen, a male, is in the NMINH collections (Reg. No. NMINH 2008: 25).

6550 [1393]. *Udea uliginosalis* (Stephens, 1834)

Udea uliginosalis was recorded from close to the summit of Corslieve in the Nephin Beg range, Co. Mayo, at a height of about 550m by J. Cromie on 17 July 2004 (Langmaid and Young, 2007). The specimen was not taken, but a photo is available.

6619 [1369]. *Uresiphita gilvata* (Fabricius, 1794)

Uresiphita gilvata was recorded from Tramore, Co. Waterford, on 18 October 2006 (Langmaid and Young, 2009b); the record is also given in Bryant (2010a). The specimen, a male, was dissected by the senior author, and is now in the NMINH collections (Reg. No. NMINH 2009: 56). Four specimens were recorded from Cape Clear Island, Co. Cork 10-13 October 2010 by E. O'Donnell and P. J. O'Keeffe; one of these, a male, is in NMINH (Reg. No. NMINH 2011:1).

6686 [1403a]. *Duponchelia fovealis* Zeller, 1847

This species was found indoors at Lucan, Co. Dublin on 11 January 2010 by P. Strickland <<http://pets.groups.yahoo.com/group/MothsIreland/message/5287>>. A further specimen was taken at a garden light-trap on 1 September 2012 at Finaghy, South Belfast (Co. Antrim) by H. Mellon <<http://pets.groups.yahoo.com/group/MothsIreland/message/9383>>.

6704 [1400]. *Antigastra catalaunalis* (Duponchel, 1833)

Antigastra catalaunalis was recorded from Barnland, Co. Wexford, by M. O'Donnell on 14 October 2005 (Langmaid and Young, 2006). A further specimen was recorded at Cronykeery, Co. Wicklow on 18 October 2005 by A. Tyner. The species was again seen at Barnland, and also at Tramore, Co. Waterford, both on 24 September 2006 (Clancy, 2008).

6819 [1979]. *Mimas tiliae* (Linnaeus, 1758)

The first confirmed Irish record the Lime-hawk Moth is of a specimen recorded from his garden in Drumcondra, Dublin City, on 19 May 2010 by S. Aylward. There are several old,

unconfirmed Irish records in the literature. Note: the species is listed as Irish in Karsholt and Razowski (1996).

6923 [1527]. *Thymelicus lineola* (Ochsenheimer, 1808)

The Essex Skipper, *Thymelicus lineola*, was recorded from Fardystown, Co. Wexford, in August 2006. It has subsequently spread outside the original discovery site (Wilson, Goodwin and Bond, 2009). Originally, it was misidentified as the Small Skipper *Thymelicus sylvestris* (Poda) (Wilson, Goodwin and Bond, 2007).

6924 [1526]. *Thymelicus sylvestris* (Poda, 1761)

The Small Skipper was recorded breeding at a site in Co. Kildare in 2005 (Harding, 2008; Harding and Jacob, in press).

7503 [1646]. *Watsonalla binaria* (Hufnagel, 1767)

The Oak Hook-tip *Watsonalla binaria* was recorded from Carrigmore, Co. Wicklow, by C. Osthoff on 28 July 2008 (Clancy, 2011; Walsh *et al.*, 2011).

7635 [1914]. *Ennomos fuscantaria* (Haworth, 1809)

A specimen of the Dusky Thorn *Ennomos fuscantaria* was taken at light at Cobh, Co. Cork on 30 September 2009 by J. Wilson. An image is available at <<http://www.flickr.com/photos/wilsonjim/3968598649/in/set-72157622240561909>>.

8072 [1691]. *Scopula emutaria* (Hübner, 1809)

Seven examples of the Rosy Wave *Scopula emutaria* were recorded on 12 July 2005 at a Robinson light-trap at Ballinoulart, Co. Wexford, and the species was subsequently found at other sites on the Wexford coast (O'Donnell, 2007). Five specimens were taken on 5 July 2006 at a 15W actinic light-trap at Tramore Burrow, Co. Waterford by T. Bryant (Bryant and Walsh, 2007).

8610 [1865]. *Chesias rufata* (Fabricius, 1775)

The Broom-tip, *Chesias rufata*, was recorded from Glenealy, Co. Wicklow on 24 May 2003, and from Carrigmore, Co. Wicklow on 5 and 12 July 2003 (M. O'Donnell). Further records are as follows: Rathdrum, Co. Wicklow, May 2004 (D. Dennison and L. Taylor); Lackan Wood, Co. Wexford, 2005, 2006 and 2007 and Barnland, Co. Wexford, 2007 (M. O'Donnell);

Carrigmore, Co. Wicklow, 2006, 2007 and 2008 (C. Osthoff).

8654 [1874]. *Euchoeca nebulata* (Scopoli, 1763)

A specimen of the Dingy Shell *Euchoeca nebulata* was recorded from Blackditch, near Newcastle, Co. Wicklow, by A. Tyner on 26 July 2008 (Clancy, 2011; Walsh *et al.*, 2011). This specimen is in the NMINH collections (Reg. No. NMINH 2009: 57). A further specimen was netted by K. Leonard at Ballysallagh, Co. Down on 29 June 2009, and the species was taken at light at three other sites in the north of Co. Down in 2012 (T. Rolston, pers. comm.). In addition, two specimens were trapped at The Raven, Co. Wexford on 30 June 2009 (Tyner, pers. comm.).

8783 [2287]. *Acronicta auricoma* ([Denis and Schiffermüller], 1775)

Clifton (2007) refers to a Cork record of the Scarce Dagger reported in Skinner (2009): Mizen Head (Co. Cork) 30 May 1937.

9368 [2404]. *Heliothis nubigera* (Herrich-Schäffer, 1851)

The Eastern Bordered Straw *Heliothis nubigera* was recorded from Tarmon, Mullet Peninsula, Co. Mayo, by D. Suddaby on 4 June 2006 (Walsh *et al.*, 2009).

9461 [2386c]. *Spodoptera ciliata* Guenée, 1852

The Dark Mottled Willow *Spodoptera ciliata* was recorded from Brownstown Head, Co. Waterford, on 13 September 2008 (Walsh and Bond, 2009; Clancy, 2011).

9531 [2313]. *Enargia paleacea* (Esper, 1788)

The Angle-striped Sallow, *Enargia paleacea*, was recorded from Legatillida, Co. Fermanagh, by V. McLoughlin on 7 August 2002 (Clancy and Skinner, 2006; Thompson and Nelson, 2006).

9562 [2271]. *Tiliacea citrago* (Linnaeus, 1758)

The Orange Sallow was recorded from Cronykeery, Ashford, Co. Wicklow, by A. Tyner on 28 September 2002 and 3 October 2004 (Bond and Gittings, 2008). A specimen was found at light-trap at Finaghy, Co. Antrim on 28 September 2009 by C. Mellon <<http://pets.groups.yahoo.com/group/MothsIreland/message/5082>>. The larva was recorded from Donabate, Co. Dublin, on 9 May 2012, and from the Phoenix Park, Co. Dublin on 18 May 2012.

(A. Tyner).

9657 [2235]. *Lithophane semibrunnea* (Haworth, 1809)

A single specimen was trapped near Ashford, Co. Wicklow by A. Tyner on 8 April 2004 <<http://www.mothsireland.com/specieslist.htm>>.

9664 [2240]. *Lithophane leautieri* (Boisduval, 1829)

Blair's Shoulder-knot *Lithophane leautieri* was recorded from near Wicklow town, Co. Wicklow, on 5 October 2002 (O'Donnell, 2003). It was also taken at Cronykeery, Co. Wicklow on 4 November 2002. Since then the species has spread considerably and it is now known from many other sites in eastern Ireland. The subspecies is given as *hesperica* Boursin in Clancy and Skinner (2003).

9866 [2371]. *Archana dissoluta* (Treitschke, 1825)

The Brown-veined Wainscot *Archana dissoluta* was recorded from Cronykeery, Co. Wicklow in 2003-2005 and 2012 by A. Tyner, and from Portumna Forest Park, Co. Galway, in August 2006 by D. Allen *et al.* (Walsh *et al.*, 2009). It was recorded from Belle Lake, Co. Waterford on 6 August 2007 by P. M. Walsh, and from Kylenamelly, Lough Derg, Co. Galway on 3 August 2010 (P. Strickland). Recently it has been recorded from Tramore, Co. Waterford, 10 August 2012 (T. Bryant), and from Ballinamorragh, Co. Wexford, 19 August 2012 (C. J. Wilson).

9999 [2191]. *Mythimna turca* (Linnaeus, 1761)

The Double Line *Mythimna turca* was recorded from The Raven, Co. Wexford, by Philip Strickland on 25 June 2010 (Tyner, 2011a).

10022 [2202]. *Mythimna l-album* (Linnaeus, 1767)

The L-album Wainscot *Mythimna l-album* was recorded from Cape Clear Island, Co. Cork, by E. O'Donnell on 11 October 2010 (O'Donnell, 2011). A further specimen was recorded, by M. O'Donnell, from Kilpatrick Dunes, Co. Wexford on 1 October 2011.

10376 [2034]. *Lymantria dispar* (Linnaeus, 1758)

The Gypsy Moth was recorded from Rathdrum, Co. Wicklow, by D. Dennison and L. Taylor on 8 August 2004 (Clancy, 2007b).

10499 [2043]. *Eilema sororcula* (Hufnagel, 1766)

The Orange Footman *Eilema sororcula* was recorded from Cronykeery, Co. Wicklow, by A. Tyner on 9 May 2008 (Clancy, 2011; Walsh, 2011).

Notes on some species

162 [57] *Stigmella filipendulae* (Wocke, 1871)

Emmet (1981) recorded *Stigmella ulmariae* (Wocke, 1879) from leaf-mines on *Filipendula ulmaria* at Ballynahinch, while Bond recorded leaf-mines under the same name from Ballynafagh Bog, Co. Kildare, in 1997 (Langmaid and Young, 1999). According to van Nieukerken (unpublished), *S. ulmariae* is a junior synonym of *S. filipendulae* (see *Fauna Europaea*; Sterling and Parsons, 2012).

1236 [327]. *Phyllonorycter cydoniella* (Denis and Schiffermüller, 1775)

Irish records of this species refer to *Ph. hostis* Triberti, 2007 (*q.v.*). The separation of the two species and the corrected synonymy of these and closely related *Phyllonorycter* species are given by Triberti (2007). Irish specimens have been bred from crab apple *Malus sylvestris* by the senior author, and from unspecified *Malus* by Heal (NMINH collection).

1269 [332a]. *Phyllonorycter leucographella* (Zeller, 1850)

The leaf-mines of the Firethorn Leaf Miner *Phyllonorycter leucographella* were recorded in Trinity College Dublin and Terenure, both in Dublin City, in January 2005 (Bond and Ashe, 2005; Langmaid and Young, 2006). Since then, it has been reported from Cos Antrim, Armagh, Cork (East and Mid), Galway (West), Meath and Tipperary (South) (Bond, 2007; Walsh *et al.*, 2011).

1852 [622]. *Elachista adscitella* Stainton, 1851

The distribution map in Bland (1996) shows records of this species from five Irish vice-counties, but the only record found by the senior author is that of larvae found at Glengarriff, Co. Cork (West) in 1994 by Emmet and Langmaid (Agassiz *et al.*, 1996). The Irish distribution shown is identical to that of the following species, *E. bisulcella*, in Bland (1996), suggesting that the wrong distribution data were used.

2498 [516]. *Coleophora trifolii* (Curtis, 1832)

A female of this species was taken at Mercury-vapour light at Little Island, Co. Cork (East) on 17 July 2012. Identification was determined by dissection. Previous Irish records are either based on doubtfully Irish material, or are based on misidentifications, or refer to other species as a result of confusing changes in taxonomy. This should therefore be considered the only fully validated Irish record of the species.

2878 [881]. *Mompha terminella* (Humphreys and Westwood, 1845)

Mompha terminella was recorded from St John's Wood, Co. Roscommon by Emmet and Langmaid (1997). The senior author found leaf-mines of the species at the same site in Co. Roscommon, and also near Killavullen in Cork (East), both in 2011. Leaf-mines were observed by C. and B. Picton at Cultra, Co. Down on 2 October 2012, det. D. Grundy (J. McClean, pers. comm.).

3389 [779]. *Bryotropha affinis* (Haworth, 1828)

As indicated in Bland *et al.* (2002), earlier Irish records of this species were based on misdeterminations. The accompanying distribution map, however, shows records from Dublin and Sligo, these being based on older unconfirmed records or misidentifications. Based on this distribution map, the species was erroneously added to the Irish list in Bond *et al.* (2006). Since then, a number of validated Irish records have been obtained in the field or from museum collections. An authentic specimen was recorded from Tramore, Co. Waterford on 15 July 2005 (Bryant, 2007a; Langmaid and Young, 2007, 2009a). Recently, the species has been recorded from further localities: Traad Point, Co. Derry, 25 May 2010 (K. Leonard) (Langmaid and Young, 2011); Dundalk, Co. Louth, 28 June 2011 (det. confirmed by the senior author). In addition, a specimen from Clare has recently been found in the Bradley collection in BM(NH) labelled "... Burren: Ballynalacken area 4-22.vii.1960" (det. K. Sattler, 2011). There is also a specimen, without an abdomen, from the Russ Collection labelled "Sligo" (det. O. Karsholt) in NMINH, but it is not certain that this is of Irish origin.

4479 [1022]. *Cnephasia pasiuana* (Hübner, [1799])

This species is listed as Irish by Beirne (1941) and Bond (1995), but omitted by Bond *et al.*

(2006). It is considered that there is insufficient evidence to include this species as Irish. There is one specimen under this name in the Russ collection, labelled “Sligo”, in NMINH, possibly not of Irish origin, while an earlier record from Co. Dublin cannot be confirmed.

4632 [998]. *Epiphyas postvittana* (Walker, 1863)

The Light Brown Apple Moth *Epiphyas postvittana* was first recorded from Rosslare, Co. Wexford by Bond (1998). The species is now widespread and common in much of the north, east and south of Ireland.

4842 [1155]. *Epinotia brunnichana* (Linnaeus, 1767)

A number of specimens of *Epinotia brunnichana* from a wide range of mainly western locations have been found in several museum collections. All these were placed under *E. solandriana* (Linnaeus), but dissections confirm that they are *E. brunnichana*. *E. brunnichiana* has also been found in a wide range of mainly western Irish localities in recent years. There is, however, one male *E. solandriana* in the NMINH collections, labelled “Sligo E.W. Brown VII.[18]94”. Its identity was confirmed by the senior author by dissection. There are many further undissected Irish specimens under the name “*solandriana*” in various museum collections.

5020 [1180]. *Notocelia tetragonana* (Stephens, 1834)

Sterling and Parsons (2012) indicate records of this species from Co. Dublin and West Mayo, in addition to Clare. The only confirmed Irish record found by the senior author is a male from Ballyeighter Wood, Co. Clare, 20 June 1970 (J. D. Bradley) (specimen and genitalia slide checked in BM(NH)).

5101 [1253]. *Grapholita orobana* (Treitschke, 1830)

Grapholita lunulana (Denis and Schiffermüller) was recorded from Tramore Burrow, Co. Waterford, by T. Bryant on 12 May 2006 and 1 June 2006 (Langmaid and Young, 2009b). The specimens, two males, were later tentatively determined as *G. orobana* (Treitschke), and published as such, and as “new to Ireland” in Langmaid and Young (2011). Subsequent examination has confirmed that the specimens are indeed *G. lunulana*; *G. orobana* should not be placed therefore on the Irish list.

5426 [1507]. *Stenoptilia zophodactylus* (Duponchel, 1840)

Since Bond (2001), *Stenoptilia zophodactylus* has also been recorded from Graig Upper, East Cork, and Killotaran, Co. Waterford. Specimens from the new sites have been dissected.

6967 [...]. *Leptidea reali* Reissinger, 1989

Recent research (Dincă *et al.*, 2011) has shown that Irish specimens of the Cryptic Wood White previously determined as *L. reali* Reissinger are in fact *Leptidea juvernica* Williams, 1946, a taxon recently found to be specifically distinct by study of the molecular genetics.

7505 [1647]. *Watsonalla cultraria* (Fabricius, 1775)

Since its discovery in Co. Down in 1999, the Barred Hook-tip has been found at a number of additional sites in Cos Down, Galway, Clare, Limerick, and on several occasions in Co. Waterford, at Carriganore, Killotaran, west of Waterford city.

[...]. 1831. *Eupithecia goossensiata* Mabille, 1869

Eupithecia goossensiata is now considered to be an ecological form of *E. absinthiata* (Clerck, 1859) (Mironov, 2003).

8660 [1867]. *Hydrelia flammeolaria* (Hufnagel, 1767)

In addition to the original single site in Co. Antrim (Belfast) and two in Co. Down, the Small Yellow Wave has been found at Barnland, Co. Wexford, 11 June 2006 (M. O'Donnell). It also continued to be reported on a number of occasions up to 2011 from Belfast, Co. Antrim, and other sites in North Down, and from Lisburn, Co. Antrim.

7540 [1890]. *Macaria alternata* ([Denis and Schiffermüller], 1775)

In addition to its first Irish location at Ardamine, Co. Wexford, the Sharp-angled Peacock has now been recorded from Kilpatrick and Barnland (M. O'Donnell) and Kilmuckridge (P. Strickland) in the same county; from Cronykeery (A. Tyner) and Avonmore riverside park (D. Dennison and L. Taylor) in Co. Wicklow; and from Tramore, Co. Waterford (T. Bryant). On 13 August 2012 a male was taken at Cloddagh, on Sherkin Island, Co. Cork by G. Hedges (dissected by the senior author).

7693 [1932]. *Agriopis leucophaearia* ([Denis and Schiffermüller], 1775)

The Spring Usher, previously known from only single records from Enniskillen, Co.

Fermanagh and Bray, Co. Wicklow, has been found at a number of widely distributed localities since 2000, mainly in Co. Wicklow (A. Tyner, M. O' Donnell, C. Osthoff, C. Flynn), but also at Cratloe Wood, Co. Clare (K. Hannan); Glendaloughin, Co. Waterford (S. MacAmhalghaidh), and at Belvoir Park, Belfast (Co. Down) (D. Allen).

7796 [1947] *Ectropis bistortata* (Goeze, 1781)

This is now treated as a synonym of *E. crepuscularia* ([Denis and Schiffermüller], 1775) in *Fauna Europaea*.

8137 [1705] *Idaea fuscovenosa* (Goeze, 1781)

This is indicated as an Irish species in Karsholt and Razowski (1996); but the authors have been unable to find a source to justify this.

8736 [2012]. *Leucodonta bicoloria* ([Denis and Schiffermüller], 1775)

The White Prominent, unrecorded from Ireland since 1938, was rediscovered at Lough Carra, Co. Kerry in 2008 (Allen *et al.*, 2008). The species has also been recorded, sometimes in numbers, at or near this locality in the years 2009 to 2012.

9454 [2384]. *Hoplodrina ambigua* ([Denis and Schiffermüller], 1775)

In addition to the two records quoted in Bond *et al.* (2006), Vine's Rustic, has been recorded from Rathlin Island, Co. Antrim, 28 August 2001 (M. Hughes *et al.*, det P. Waring), while a male taken on Cape Clear Island, Co. Cork on 11 October 2010 by E. O'Donnell was dissected by the senior author.

8874 [2452]. *Catocala nupta* (Linnaeus, 1767)

Previously known only from a 1906 record from Co. Cork; the Red Underwing was recorded singly on four occasions in Co. Louth in the period 2006 to 2011 (D. Hodgers, S. McKeever, C. Honan).

9790 [2343a]. *Mesapamea secalella* Remm, 1983

Recent taxonomic studies (Zilli *et al.*, 2005) have shown that the name *didyma* Esper is a junior synonym of *secalis* Linnaeus, 1758. The name used for the Lesser Common Rustic therefore reverts to *Mesapamea secalella* Remm, 1983.

Other species

An Irish distribution is indicated for six species indicated below in Sterling and Parsons (2012); but either the records upon which this is based are erroneous, as indicated in Bond (1995), *viz.* *Glyptipterix equitella*, *Epinotia demarniana*, *Crambus pratella* and *C. hamella*, or, as in the case of *Eana incanana* and *Merrifieldia baliodactylus*, it cannot be substantiated by the senior author.

Species removed from the Irish Lepidoptera list

142 [71]. *Stigmella zelleriella* (Snellen, 1875)

Further examination of the genitalia slide of the specimen from Bull Island, Co. Dublin and reference to the illustrations in Bengtson (2008), indicate that it is a male *Stigmella salicis* (Stainton, 1854). *S. zelleriella* should therefore be removed from the Irish list.

1322 [356]. *Phyllonorycter tristrigella* (Haworth, 1828)

Bradley's record of *Phyllonorycter tristrigella* from South Kerry is erroneous (Mere *et al.*, 1964). The specimen, which is in the BM(NH) collection, has been re-examined, dissected, and determined as a male *Ph. nicellii* (Stainton) by the senior author.

2716 [562]. *Coleophora asteris* Mühlig, 1864

The record of this species from Co. Meath in Emmet *et al.* (1996), repeated in Bond *et al.* (2006), is erroneous, being based on a misidentification of *Coleophora virgaureae* (see Emmet and Langmaid, 1997: 150).

2721 [566]. *Coleophora sternipennella* (Zetterstedt, 1839)

Bond (2005) and Langmaid and Young (2005) reported *Coleophora sternipennella* from Clare Island, Co. Mayo. This record is erroneous, being based on a misidentification of a female of *C. saxicolella* (Duponchel).

2939 [871] *Oegoconia deauratella* (Herrich-Schäffer, 1854)

The indication of the occurrence of this species in Ireland in Bland (2002) and Bond *et al.* (2006) is incorrect. The records mentioned in Bland (2002) refer to *O. quadripuncta* (Haworth, 1828), and the associated vice-county distribution shown there should be combined with that for

O. quadripuncta.

3231 [751]. *Aristotelia subdecurtella* (Stainton, 1859)

The map showing the Irish distribution of *Aristotelia subdecurtella* in Bland *et al.* (2002) and the inclusion of this species in Bond *et al.* (2006) are erroneous. As implied in the accompanying text in Bland *et al.* (2002), this species has not been recorded in Ireland. The map in question indicates the Irish distribution of *Metzneria aestivella* (Zeller, 1839).

3242 [746]. *Chrysoesthia drurella* (Fabricius, 1775)

The inclusion of this species in Bond *et al.* (2006) is incorrect, probably arising through confusion with the taxonomy. The record indicated there refers to *Cosmopterix orichalea* Stainton, 1861 (= *C. druryella* Zeller, 1850 misidentification).

4493 [1016]. *Cnephasia longana* (Haworth, 1811)

Although earlier records were accepted by Beirne (1941), Bond (1995) and Bond *et al.* (2006), the inclusion of this species on the Irish list seems unjustified. There are two specimens under this name in the Russ collection, one labelled “Sligo”, in NMINH, but it is possible that they are not of Irish origin.

4721 [1065]. *Celypha rufana* (Scopoli, 1763)

The Greer record of *Celypha rufana* was accepted by Beirne (1942), but Huggins (1950) gives reasons for rejecting it. The species was not listed in Bond *et al.* (2006).

4945 [1194]. *Eucosma aemulana* (Schläger, 1849)

The record in Beirne (1945), repeated in Bond *et al.* (2006) is based on a misidentification (E. Hancock, pers. comm.) and the species should be deleted from the Irish list.

6082 [1482]. *Homoeosoma nimbella* (Duponchel, 1836)

There are no proven Irish specimens in NMINH. The earliest Irish record by Shield (1853) refers to larvae in seeds of “wild chamomile”, but the reported foodplant of this species is sheep’s-bit, *Jasione montana* (Sterling and Parsons, 2012), suggesting the species involved may have been the superficially similar *Phycitodes saxicola*.

7021 [1543]. *Colias hyale* (Linnaeus, 1758)

There are no confirmed Irish records of this species (Nash *et al.*, 2012).

7724 [1936]. *Menophra abruptaria* (Thunberg, 1792)

This was considered doubtfully Irish by Baynes (1964), and there have been no more recent records of this species.

8698 [2019]. *Closteria curtula* (Linnaeus, 1758)

According to Baynes (1964) “further evidence of the existence of this species in Ireland is desirable”, although he does mention that larvae had been reported “from time to time”, but no moths were bred. Although the species was included in Bond *et al.* (2006), the Irish status of the species should be considered unconfirmed.

8778 [2279]. *Acronicta aceris* (Linnaeus, 1758)

This species was included as Irish without comment in Bond *et al.* (2006), although the Irish records were considered unconfirmed by Baynes (1964). As there have been no subsequent records, the status remains unconfirmed.

Acknowledgements

The senior author is greatly indebted to the staff of the Department of Entomology at the Natural History Museum, London, in particular to Kevin Tuck and Martin Honey for considerable assistance; also to Jeff Hancock at the Hunterian Museum and Art Gallery, University of Glasgow, Glasgow and Keith Bland at National Museums of Scotland, Edinburgh, for making available the respective collections of Microlepidoptera. The visits to the various entomological collections were jointly funded by National Biodiversity Data Centre and the National Museum of Ireland, as part of the compilation of the Database of Irish Microlepidoptera. We are grateful to Angus Tyner for his helpful comments on the manuscript.

Appendix

A concise and updated checklist of the Irish Lepidoptera is provided, based on Bond, Nash and O'Connor (2006) and information contained in the present paper. The Fauna Europaea species number is used, followed by the number used in Bradley (2000) in square brackets. Binomial names are given but Irish subspecies are indicated where considered relevant. Deleted species are in square brackets []. Additions since Bond *et al.* (2006) are indicated by an asterisk*.

SYSTEMATIC LIST

An "A" preceding the species number indicates that the species is considered an adventive, or accidental introduction, incapable of breeding in Ireland.

MICROPTERIGIDAE

7 [4]. *Micropterix aruncella* (Scopoli, 1763)

8 [3]. *Micropterix aureatella* (Scopoli, 1763)

10 [5]. *Micropterix calthella* (Linnaeus, 1761)

28 [2]. *Micropterix mansuetella* Zeller, 1844

ERIOCRAINIIDAE

48 [6]. *Dyseriocrania subpurpurella* (Haworth, 1828)

Synonym *Eriocrania subpurpurella* (Haworth, 1828)

49 [7]. *Paracrania chrysolepidella* (Zeller, 1851)

Synonym *Eriocrania chrysolepidella* (Zeller, 1851)

50 [8]. *Heringocrania unimaculella* (Zetterstedt, 1839)

Synonym *Eriocrania unimaculella* (Zetterstedt, 1839)

51 [9]. *Eriocrania sparrmannella* (Bosc, 1791)

52 [10]. *Eriocrania salopiella* (Stainton, 1854)

53 [11]. *Eriocrania cicatricella* (Zetterstedt, 1839)

55 [12]. *Eriocrania sangii* (Wood, 1891)

56 [13]. *Eriocrania semipurpurella* (Stephens, 1835)

HEPIALIDAE

67 [17]. *Pharmacis lupulina* (Linnaeus, 1758)

Synonym *Hepialus lupulina* (Linnaeus, 1758)

COMMON SWIFT

69 [18]. *Pharmacis fusconebulosa* (DeGeer, 1778)

Synonym *Hepialus fusconebulosa* (DeGeer, 1778)

MAP-WINGED SWIFT

78 [16]. *Phymatopus hecta* (Linnaeus, 1758)

Synonym *Hepialus hecta* (Linnaeus, 1758)

GOLD SWIFT

80 [14]. *Hepialus humuli* (Linnaeus, 1758)

HOST MOTH
